

Connect Historical Data (End of Day)

Connections & Data Feeds / Setup | beginner | 5 min to complete | DeepCharts Help Center | August 24, 2026

By the end you will have the **Historical** feed source connected and a chart showing end-of-day data. This connection loads historical (end-of-day) data rather than a live streaming feed, which makes it useful when you want to review past price action without a live data subscription.

The setup follows the same pattern as every other feed in DeepCharts: create the connection in **Feed Settings**, then route an exchange to it in **Symbol Manage**.

Before you start

- DeepCharts installed and activated — [How to Install DeepCharts and Activate Your License](#)
- Familiarity with the general connection flow helps but is not required — [How to Connect a Data Feed \(Feed Settings\)](#)

Steps

1. Launch DeepCharts.
2. Click **Select Connection** → **Feed Settings**.

[SCREENSHOT PLACEHOLDER] DeepCharts main bar with the Select Connection dropdown open and Feed Settings highlighted `feed-settings-menu-historical.png`

3. Click **Add Connection**.
4. In **Name**, enter any profile name you like, for example "End of Day".
5. In **Feed Source**, select **Historical**.

[SCREENSHOT PLACEHOLDER] Feed Settings dialog with the Feed Source dropdown open and Historical highlighted, Name filled in as "End of Day" `feed-settings-historical-source.png`

[CONFIRM: whether the Historical feed source requires any credentials or an active subscription, and which exchanges/symbols and how much history it provides]

6. Click **Save** and close the Feed Settings window.
7. Open **Options** → **Symbol Manage** and point an exchange at your new profile — either:
 - find the exchange you want and change its **Data Feed** to the new Historical profile (the chain-link icon on the row changes the feed), or
 - add a new exchange and set its data feed to the Historical profile.

See [Symbol Manage: Subscribe Exchanges and Map Your Feed](#) for the full walkthrough of every Symbol Manage state, or try the interactive mock below — click the chain-link icon on a row to cycle its mapped feed.

[WIDGET: symbol-manage-mock]

8. Open a new chart on that exchange — it loads the historical data. See [Open Your First Chart](#).

Verify it worked

A newly opened chart on the routed exchange displays historical price data. Because this is end-of-day data, do not expect live intraday updates — the chart will not tick in real time.

Note: If you later want live data on the same exchange, switch its Data Feed back to a live connection in **Symbol Manage** — see [Manage and Switch Between Feed Connections](#) for juggling multiple feed

profiles.

If something went wrong

- **Chart shows no data** — the exchange is not routed to the Historical profile. Re-check the Data Feed column in Symbol Manage: Subscribe Exchanges and Map Your Feed.
- **Chart looks frozen** — expected behavior for end-of-day data; it does not update live. If you need live prices, connect a live feed (How to Connect a Data Feed (Feed Settings)) or try the free option in Use the Free 15-Minute Delayed Data Feed.
- **You need more or missing history on a live feed** — see Re-download Historical Data (Download Data Tool).
