

Fix: dxfeed.myfundedfutures.com Failed

Connections & Data Feeds / Troubleshooting | beginner | 10 min to complete | DeepCharts Help Center | August 24, 2026

This connection error means the market data feed is not activated for your trading account. Before dxFeed grants data access, you must sign the Market Data Agreement with your trading firm — until then, the connection is blocked. This is not a DeepCharts software issue; activation is handled by the data provider and your trading firm.

Symptom

When connecting your prop-firm dxFeed account, the connection fails with:

dxfeed.myfundedfutures.com failed: You need to sign the datafeed

[SCREENSHOT PLACEHOLDER] The connection error dialog showing the full "dxfeed.myfundedfutures.com failed: You need to sign the datafeed" message `myfundedfutures-sign-datafeed-error.png`

The hostname in this example belongs to MyFundedFutures; if your account is with a different dxFeed prop firm, the hostname in the message may differ, but the meaning and the fix are the same.

Not to be confused with:

- Fix: dxFeed DATA_ACCESS_SUSPENDED — you already signed the agreement, but dxFeed suspended access after a Non-Professional status review.
- Fix: Connection Failed — Check Username and Password — the connection is rejected because the credentials are wrong.

Most likely cause

The Market Data Agreement has not been signed (or has not been activated yet) for your trading account, so the data provider is blocking market data access.

Common triggers are a newly created account, market data that was never activated, and an unregistered Non-Professional status.

Quick fix

1. Identify the trading firm your account belongs to. For the hostname above, that is MyFundedFutures.
2. Contact the firm's support and ask: **"How can I sign the Market Data Agreement (Non-Professional) for my DXFeed data?"**
3. Complete the agreement they send you, making sure you select **Non-Professional** status if you qualify. See Sign Your Market Data Agreement for what the agreement covers and how the status choice works.
4. Wait for the activation confirmation. Activation can take anywhere from a few minutes to a few hours.
5. Restart DeepCharts and reconnect the data feed.

If you need to re-enter the connection details while reconnecting, try the live Feed Settings mock below — pick **dxFeed Prop** as the source and note that there is no server field to fill in.

`!WIDGFT! feed-navigator!`

If that didn't work

Cause: Activation is still propagating

If you signed the agreement recently, the activation may simply not have reached the data servers yet. Wait a while longer, then restart DeepCharts and try again.

Cause: The agreement is signed but data is still inactive

Confirm with your trading firm that market data is actually active on your account and that your Non-Professional status was registered. Market data access stays blocked until the provider marks the agreement as complete.

Still stuck

Generate a Diagnostic Report: Before You Contact Support and contact DeepCharts Support through How to Get Help (Chat, Diagnostic Report, Support) — include the exact error text and the name of your trading firm.

Prevent this

Sign the Market Data Agreement immediately after creating a new account, and verify your Non-Professional status before launching the platform. The process is described in Sign Your Market Data Agreement, and the full prop-firm connection walkthrough is in Connect a Prop-Firm dxFeed Account (MFF, Aqua, Goat...).
