

# Fix: Connection Failed — Unable to Establish Connection

Connections & Data Feeds / Troubleshooting | beginner | 15 min to complete | DeepCharts Help Center | August 24, 2026

This error means DeepCharts is unable to establish a stable connection to the data feed. It is almost always caused by something on the system side — network restrictions, a missing Windows component, or a Windows language/region incompatibility — rather than by your feed credentials. Work through the fixes below in order.

## Symptom

When connecting a data feed, the connection fails with:

**Connection Failed: Unable to establish connection. Please check your internet connection.**

[ SCREENSHOT PLACEHOLDER ] The connection error dialog showing the full "Unable to establish connection" message after a failed feed connection attempt `unable-to-establish-connection-error.png`

Not to be confused with:

- **Fix: Connection Failed — Check Username and Password** — the feed reaches the server but rejects your credentials.
- **Fix: Connection Failed — Bad Server** — a dxFeed authorization error, not a network failure.
- **Fix: Unable to Load DLL DXFeed\_64.dll** — a DLL loading error that names DXFeed\_64.dll explicitly.

## Most likely cause

An unstable internet connection, or a VPN/proxy service blocking or rerouting the data feed traffic.

## Quick fix

1. Verify your internet connection is stable and fast (load a few websites, or run a speed test).
2. If you use a VPN or proxy, disconnect it. VPN usage is a common cause of this error.
3. Close DeepCharts completely.
4. Reopen DeepCharts and try connecting the feed again.

## If that didn't work

### **Cause: Missing or outdated Microsoft Visual C++ Redistributable**

DeepCharts requires the latest supported Microsoft Visual C++ Redistributable — it is a mandatory system dependency, and a missing or outdated version prevents the feed from connecting.

Download and run the installer that matches your system:

| Architecture | Download link                                                                                 | Notes                           |
|--------------|-----------------------------------------------------------------------------------------------|---------------------------------|
| X64 (64-bit) | <a href="https://aka.ms/vc14/vc_redist.x64.exe">https://aka.ms/vc14/vc_redist.x64.exe</a>     | Standard for most modern PCs    |
| X86 (32-bit) | <a href="https://aka.ms/vc14/vc_redist.x86.exe">https://aka.ms/vc14/vc_redist.x86.exe</a>     | Required on some 64-bit systems |
| ARM64        | <a href="https://aka.ms/vc14/vc_redist.arm64.exe">https://aka.ms/vc14/vc_redist.arm64.exe</a> | For ARM-based Windows devices   |

[ SCREENSHOT PLACEHOLDER ] The Microsoft Visual C++ Redistributable installer window on the setup screen, before clicking Install `vc-redist-setup-screen.png`

After installation:

1. Restart your computer.
2. Launch DeepCharts.
3. Try connecting the feed again.

### ***Cause: Windows language or region is not set to English***

A non-English system language or regional format can cause connection and parsing issues, and is a known cause of feed initialization failures.

1. Open **Windows Settings** → **Time & Language** → **Language** and set the Windows display language to **English**.

[ SCREENSHOT PLACEHOLDER ] Windows Settings Time & Language > Language page with the display language dropdown set to English windows-language-english.png

2. Open **Windows Settings** → **Time & Language** → **Region** and set **Country or region** to **United States** (or another English-supported region).

[ SCREENSHOT PLACEHOLDER ] Windows Settings Time & Language > Region page with Country or region set to United States windows-region-united-states.png

3. Restart your PC, open DeepCharts, connect the data feed, and open a chart.

**Note:** Always restart the computer after changing system-level settings — the change does not take effect for DeepCharts until you do.

## **Still stuck**

Generate a Diagnostic Report: Before You Contact Support so support can see the connection attempt details, then contact the team through [How to Get Help](#) (Chat, Diagnostic Report, Support).

## **Prevent this**

- Avoid running a VPN while DeepCharts is connected to a feed.
- Keep the Visual C++ Redistributables updated.
- Keep the Windows system language and region English-compatible (English/US recommended).
- Check your machine against System Requirements, and follow [How to Connect a Data Feed](#) (Feed Settings) when setting up feeds.
