

Use the Free 15-Minute Delayed Data Feed

Getting Started | beginner | 10 min to complete | DeepCharts Help Center | August 24, 2026

By the end you will have free market data flowing into DeepCharts through the built-in 15-minute delayed dxFeed source — no username, password, paid subscription or market data agreement needed.

Everything you see on this feed is 15 minutes behind the live market. That makes it ideal for learning the platform, exploring indicators and practicing on a SIM account, and unsuitable for making real-time trading decisions. When you need live data, see [How to Buy a Data Feed and Get Your Credentials](#).

Before you start

- DeepCharts installed and your license activated — see [How to Install DeepCharts and Activate Your License](#).
- Nothing else. This feed requires no credentials and no agreement — that is the point of it.

Steps

If you are on the first-run Startup Wizard

1. On the wizard's datafeed step, select **I want to use 15 minutes delayed data powered by dxFeed for the moment** and click **Next**.

[SCREENSHOT PLACEHOLDER] Startup Wizard datafeed step with the radio option I want to use 15 minutes delayed data powered by dxFeed for the moment selected `wizard-delayed-feed-selected.png`

2. On the **Symbol Manage** step, review the table mapping each exchange to the delayed feed. The wizard pre-maps the main futures exchanges (CME, CBOT, COMEX, EUREX, NYMEX and others) for you — you can leave it as is. Click **Next**, finish the customize step, and click **Done**.

You are done — skip to Verify it worked below.

If you already finished the wizard (add the feed later)

1. Click the **Feed** selector on the main bar and choose **Feed Settings**.

[SCREENSHOT PLACEHOLDER] Feed selector dropdown on the main bar with the Feed Settings item highlighted `feed-selector-feed-settings.png`

2. Click **Add Connection**.

3. In **Name**, type a display name for the connection — for example `dxFeed - 15m`.

4. In **Feed Source**, select **dxFeed - 15m delayed**. No username or password is required for this source. Try it in the interactive Feed Settings window below — the Feed Source dropdown changes which fields each source asks for.

[WIDGET: feed-navigator]

5. Click **Save** and wait for the saving confirmation.

6. Open the **Feed** selector on the main bar again and select your new connection. The status dot turns **green** when connected.

7. Open **Options** → **Symbol Manage** and make sure the exchanges you want are mapped to your delayed connection in the **Data Feed** column. To add one, click **Subscribe**, pick your delayed connection in the **Data feed source** dropdown, and select the exchanges. To re-point an existing row, use its chain-link (**Change connection**) icon. Try both in the live mock below. Full reference: [Symbol Manage](#):

Subscribe Exchanges and Map Your Feed.

[WIDGET: symbol-manage-mock]

8. Open your first chart: **New** → **Price Chart** — see Open Your First Chart.

Verify it worked

- The **Feed** selector shows your delayed connection with a **green** dot.
- A price chart builds and updates — during market hours the prices you see are roughly 15 minutes behind the live market, and the platform flags the data as delayed rather than real time. **[CONFIRM: exact wording and placement of the delayed-data banner shown with the 15-minute feed]**

[SCREENSHOT PLACEHOLDER] A price chart receiving data from the delayed feed with the delayed-data indication visible and the green feed dot in the main bar `delayed-feed-chart-running.png`

Note: What you give up versus a live feed: every price, DOM level and tape print arrives 15 minutes late, so timing-sensitive work (scalping practice against the current market, live trade decisions) is off the table. What still works fully: every window and indicator, chart layouts, replay, and paper trading on a SIM account — see Trading Accounts and Simulation. When you outgrow it, a live feed drops in through the same Feed Settings dialog: How to Buy a Data Feed and Get Your Credentials.

If something went wrong

Symptom	Where to go
Feed is green but the chart never moves	Fix: Live Feed Connected but Chart Is Not Moving — with the delayed feed, also remember bars only progress 15 minutes behind the clock
The instrument picker is empty when opening a chart	No exchanges are subscribed — map them in Symbol Manage: Subscribe Exchanges and Map Your Feed
The connection never turns green	Fix: Connection Failed — Unable to Establish Connection
You expected live prices	This feed is delayed by design — for real-time data see How to Buy a Data Feed and Get Your Credentials
