

Link Windows with Color Groups

Charts & Workspace | intermediate | 5 min to complete | DeepCharts Help Center | August 24, 2026

By the end you will have two or more charts joined in a color link group, so switching the symbol on one chart (for example NQ → ES) switches it on all of them in a single action.

This is the fastest way to run a multi-timeframe workspace: one 1-minute chart, one 5-minute chart, one 15-minute chart — all following the same instrument, each keeping its own timeframe and settings.

Before you start

- At least two price charts open — Open Your First Chart
- The instruments you plan to switch between subscribed in Symbol Manage — Symbol Manage: Subscribe Exchanges and Map Your Feed (the instrument picker only shows exchanges you are subscribed to)

Steps

1. On the first chart, click the square **link** icon at the top-right of the window title bar, to the left of the minimize button.

[SCREENSHOT PLACEHOLDER] Top-right corner of a chart window with the square link icon highlighted, left of the minimize/maximize/close buttons `chart-link-icon-titlebar.png`

2. The link menu opens with these options: **None link**, **Link 1** through **Link 8** (each with its own color — Link 1 red, Link 2 green, Link 3 blue, Link 4 magenta, Link 5 purple, Link 6 yellow, Link 7 cyan, Link 8 pink), and **\$ Link Trading Symbol**. Select **Link 1**.

[SCREENSHOT PLACEHOLDER] Chart link menu open showing None link, the eight colored Link entries and the \$ Link Trading Symbol option, with Link 1 highlighted `chart-link-menu-options.png`

3. On the second chart, open the same link menu and select **Link 1** as well. Both charts now belong to the same color group.
4. Change the symbol on either chart: click the symbol dropdown in the chart title bar and pick a new instrument in the **Select Instrument** dialog. You can rehearse the whole flow live below — set both mini charts to the same link color, then switch the symbol on one and watch the other follow with a flash.

5. Confirm the selection — every chart sharing that link color switches to the new symbol.

Note: Color groups sync the symbol only. Timeframe, indicators, drawings and every other setting stay independent per chart. To mirror drawings between charts, use right-click → **Drawing Tool From Other Chart** instead — see Drawing Tools and Annotations.

If you want to unlink a chart

Open the chart's link menu and select **None link**. The chart keeps its current symbol but stops following the group.

If you want several independent groups

Use different colors. With eight link groups you can, for example, keep three charts following NQ on **Link 1** and two charts following ES on **Link 2** — the groups never affect each other.

If you are curious about "\$ Link Trading Symbol"

The link menu's last entry links a trading symbol rather than a chart color group. **[CONFIRM: exact behavior of the "\$ Link Trading Symbol" option — what it links and across which windows/panels]**

[**CONFIRM: whether non-chart windows (Advanced DOM, Advanced Time And Sales, Profile Chart) can join the same color link groups**]

Verify it worked

Change the symbol on any chart in the group. All charts with the same link color redraw with the new instrument within moments, while each chart's timeframe and indicators stay exactly as they were.

If something went wrong

- **The other chart did not switch** — the two charts are not on the same color. Open the link menu on each and confirm the identical **Link** entry is selected (not **None link**).
- **The new symbol is missing from the Select Instrument dialog** — its exchange is not subscribed. Fix the subscription in Symbol Manage: Subscribe Exchanges and Map Your Feed, or see Fix: Symbol Subscription Issue.
- **A linked chart shows no data on the new symbol** — the feed routing for that exchange may differ. Check the exchange's data feed assignment in Symbol Manage: Subscribe Exchanges and Map Your Feed and see Fix: Live Feed Connected but Chart Is Not Moving.
