

Fix: Rithmic — Expert Not Attached

Connections & Data Feeds / Troubleshooting | beginner | 5 min to complete | DeepCharts Help Center | July 20, 2026

The **Rithmic: Expert not attached** error appears when DeepCharts is waiting for an external Rithmic component that is not running on your computer. The connection is not broken — DeepCharts is simply configured to expect R Trader Pro in the background, and it cannot find it.

Symptom

- You connect a Rithmic data feed and the connection indicator turns **yellow** — and stays yellow instead of turning green.
- The error message **Rithmic: Expert not attached** is shown.

[SCREENSHOT PLACEHOLDER] Rithmic feed connection showing the yellow status indicator together with the "Rithmic: Expert not attached" error message `rithmic-expert-not-attached-yellow.png`

A yellow indicator means the connection is waiting or only partially established; green confirms a successful data feed connection.

Not to be confused with:

- Fix: Please Log In Using R Trader or R Trader Pro — a different message that asks you to log in using R Trader or R Trader Pro.
- Fix: Connection Failed — Check Username and Password — the connection fails outright with a credentials error.
- Fix: Connection Failed — Bad Server — the connection fails because the wrong server is selected.

Most likely cause

The **Use R|Trader** option is enabled in your Rithmic feed settings, so DeepCharts expects R Trader Pro to be running in the background with the required plugins enabled — and it is not.

Quick fix

Disabling **Use R|Trader** is the simplest approach and resolves the issue for most users:

1. Open DeepCharts.
2. Open the **Feed Settings** for your Rithmic connection (see Manage and Switch Between Feed Connections if you are unsure where to find it).
3. Find the **Use R|Trader** option.
4. Untick (disable) the option.

5. Click **Save**.
6. Restart DeepCharts.

After the restart, the connection should turn green.

If that didn't work

Cause: You intentionally use R Trader Pro

If you specifically need the R Trader Pro route — for example because your account is set up that way — keep **Use R|Trader** enabled and make sure the external component is actually running:

1. Open R Trader Pro.

2. Log in with the **same Rithmic credentials** you entered in DeepCharts.
3. Enable the required plugins.
4. Keep R Trader Pro running in the background.
5. Launch DeepCharts.

The full plugin setup is covered in [Connect Rithmic Using the RTrader Pro Plugin](#).

Note: In most cases this method is not required. Only enable **Use RTrader** if you specifically need it.

Cause: A different connection problem

If the indicator still does not turn green after disabling **Use RTrader**, the remaining problem is likely unrelated to this error. Re-check your credentials and server selection against the setup guide in [How to Connect a Rithmic Data Feed](#), and see [Fix: Connection Failed — Check Username and Password](#) and [Fix: Connection Failed — Bad Server](#) for the two most common follow-up errors.

Still stuck

Generate a Diagnostic Report: [Before You Contact Support](#) so support can see your connection state, then reach out through the channels listed in [How to Get Help \(Chat, Diagnostic Report, Support\)](#).

Prevent this

Follow the Rithmic setup guide in [How to Connect a Rithmic Data Feed](#) and leave **Use RTrader** disabled unless you deliberately use the plugin workflow described in [Connect Rithmic Using the RTrader Pro Plugin](#).
