

How to Install DeepCharts and Activate Your License

Getting Started | beginner | 15 min to complete | DeepCharts Help Center | July 20, 2026

By the end you will have DeepCharts installed, your license activated, and the platform ready to connect a data feed.

Before you start

- Confirm your machine meets the System Requirements.
- Have your my.deepcharts.com account email and password ready — the installer download and your license key both live in that dashboard.
- Know where your license comes from: bought directly, it is in your my.deepcharts.com account; bought through a prop firm, both the installer and the license come from the **prop firm's dashboard** instead.
- Optional: data feed credentials if you already have them (How to Buy a Data Feed and Get Your Credentials). If not, the free delayed feed works with no credentials — see Use the Free 15-Minute Delayed Data Feed.

Steps

1. Log in to your account at my.deepcharts.com with your email and password.

2. Download the **DeepchartsInstaller.zip** file.
3. Extract the downloaded archive (right-click → **Extract All** in Windows Explorer).
4. Temporarily disable your antivirus software.

Warning: This is the most commonly skipped step and the number-one cause of failed installations — antivirus products can quarantine installer components mid-install. Re-enable your antivirus as soon as installation finishes.

5. Run **DeepchartsInstaller.exe**.
6. Accept the installation terms and conditions, then click **Install**.

7. Reboot your PC if the installer prompts you to.
8. Launch DeepCharts from the Desktop shortcut. A splash screen appears ("Starting Application", then "Loading Indicators") — the app version is shown in the bottom-right corner of the splash, which is useful to know when contacting support.

9. In the **License Key** window, enter:
 - **E-mail** — the email registered at my.deepcharts.com
 - **License** — the alphanumeric license key shown in your my.deepcharts.com account

Then click **Login**. The button shows a short countdown while the key is verified.

Tip: Paste the email and key with no leading or trailing spaces. Stray whitespace from copy-paste is by far the most common cause of an "Invalid License" error.

10. Complete the three-step **Startup Wizard** that runs on first launch:

- **Datafeed** — choose between "I want to use 15 minutes delayed data powered by dxFeed for the moment" and "I have a datafeed and I want to configure and connect it".
- **Symbol Manage** — review the exchange-to-feed mapping table (the wizard pre-maps the main exchanges for you). This is the same window as **Options** → **Symbol Manage** — see Symbol Manage: Subscribe Exchanges and Map Your Feed.
- **Customize experience** — pick a **Theme** and an **Alert sound profile**, then click **Done**.

If you do not have data feed credentials yet

Choose the delayed-data option in the wizard — it needs no username, password or market data agreement. Full walkthrough: Use the Free 15-Minute Delayed Data Feed.

If you already have feed credentials

Choose "I have a datafeed and I want to configure and connect it" and enter your connection details: a **Name** for the connection, the **Feed Source** (your provider), and your **Username** and **Password** from the data provider. Save and wait for the connection indicator to turn green. The interactive Feed Settings window below shows those same fields — switch the Feed Source dropdown to see what each provider asks for. Details per provider: How to Connect a Data Feed (Feed Settings) and Supported Brokers, Prop Firms and Data Feeds.

[WIDGET: feed-navigator]

If your license came from a prop firm

Download the setup file from your prop firm's dashboard — not from my.deepcharts.com — and activate with the license details the prop firm issued you.

If you are updating an existing installation

Download the latest installer from the dashboard and run it — no need to uninstall first. It updates the existing installation in place and keeps your settings.

Note: The BETA and STABLE versions cannot be installed together on one PC — it is one or the other.

Verify it worked

- DeepCharts opens to the main bar without asking for the license again.
- The **Feed** selector on the main bar shows your connection name with a **green** status dot (if you configured a feed).
- **New** → **Price Chart** opens the instrument picker and a chart builds — see Open Your First Chart.
