

Customize Language, Theme and Notification Sounds

Charts & Workspace | beginner | 5 min to complete | DeepCharts Help Center | August 24, 2026

By the end of this guide you will have DeepCharts running in your preferred language, time zone, color theme and alert notification voice. All four settings live in one place — the **General** section of the settings window — so this is a single short trip through the menus.

You may already have picked a theme and an alert sound profile in the Startup Wizard on first launch. Everything the wizard set can be changed again at any time using the steps below.

Before you start

- DeepCharts is installed and your license is activated
- No data feed connection is required — these are local platform settings
- Be ready to restart DeepCharts: language and time zone changes only apply after a restart

Steps

1. In the main menu bar, click **Options**.

[SCREENSHOT: DeepCharts main menu bar with the Options menu open, showing the Settings item about to be clicked | options-menu-settings.png]

2. Select **Settings**. The **General Settings** window opens. Make sure the **General** tab is selected (the other tabs are **Toolbar**, **Alert**, **Sim Account**, **Trading Quantity** and **Shortcuts**).

[SCREENSHOT: General Settings window on the General tab, with the Language, Time Zone, Theme and Notification Sounds settings visible near the top | general-settings-general-tab.png]

3. Change any of the settings below, then continue with step 4.

If you want to change the language

Open the **Language** dropdown and pick one of the five available interface languages: **English**, **Italian**, **Spanish**, **German** or **Chinese**.

[SCREENSHOT: General Settings window with the Language dropdown open, showing all five entries: English, Italian, Spanish, German, Chinese | general-settings-language-dropdown.png]

> **Note:** The platform supports five languages, but the my.deepcharts.com account dashboard currently supports only English and Italian. Changing the platform language does not change the dashboard.

If you want to change the time zone

Open the **Time Zone** dropdown and pick your time zone from the list. This controls how chart times are displayed. Like the language, the change needs a restart to apply — if your chart time axis looks unchanged right after saving, that is expected.

If you want to change the theme

Open the **Theme: Platform Appearance** dropdown and pick one of the six themes: **Dark**, **Dark (Standard)**, **Blue**, **Light**, **Light (Standard)** or **Purple**.

[SCREENSHOT: General Settings window with the Theme dropdown open listing Dark, Dark (Standard), Blue, Light, Light (Standard), Purple | general-settings-theme-dropdown.png]

If you want to change the notification voice

Under **Notification Sounds**, choose the voice profile used for alert notifications. The available options are **Female - Emily**, **Female - Daniela**, **Male** and **Warzone**.

[SCREENSHOT: General Settings window showing the Notification Sounds setting with its four options: Female - Emily, Female - Daniela, Male, Warzone | general-settings-notification-sounds.png]

> **Tip:** This setting picks the voice for notifications. Custom sound files for indicator and drawing-tool alerts are managed separately on the **Alert** tab of the same window (add .wav or .mp3 files there), and the order-execution sound is enabled under **Options** → **Alerts** → **Trading Sounds**.

4. Click **Save Settings** at the bottom of the window.

[SCREENSHOT: Bottom of the General Settings window with the Cancel and Save Settings buttons, Save Settings highlighted | general-settings-save-button.png]

5. Close and reopen DeepCharts if you changed the language or the time zone. Both require a restart to take effect.

Verify it worked

- **Language** — after the restart, the menus (for example **Options** and its entries) display in the language you selected.
- **Time zone** — after the restart, the time axis on an open chart shows times in your selected zone.
- **Theme** — the platform colors match the theme you picked.
- **Notification voice** — the next alert that fires uses the voice profile you selected.

If something went wrong

- **The language or chart time zone did not change** — the two most common causes are clicking the window's close button instead of **Save Settings**, and not restarting the app. Repeat the steps, save, then restart.
- **The my.deepcharts.com dashboard is still in English** — expected. The dashboard supports only English and Italian and is set independently of the platform.
- **An indicator alert plays no sound** — the notification voice is not the issue. Indicator and drawing-tool alerts use sound files from **Options** → **Settings** → **Alert**; if no sounds were added there, the sound list inside indicator alert settings is empty.
- **No sound when an order executes** — enable **Options** → **Alerts** → **Trading Sounds**.
