

Fix: Could Not Find a Part of the Path

Data & Database | beginner | 5 min to complete | DeepCharts Help Center | July 16, 2026

The error "**Could not find a part of the path**" — followed by a location such as `C:\Users\...\AppData\Local\Deepchart\Database\...` — appears when DeepCharts cannot locate required data folders inside its local database directory. It almost always follows a manual deletion of database or symbol folders, and the fix is usually nothing more than a full restart.

Symptom

- An error dialog appears when opening a chart or loading data, reading "Could not find a part of the path" with a file path pointing into the local database directory (for example under `AppData\Local\Deepchart\Database`).
- It typically shows up right after you (or a cleanup tool) deleted database or symbol folders while the platform was still running, or after folder deletion without a restart.

This is a local file system issue, not a data feed or server error. Not to be confused with "The System Cannot Find the File Specified", which is a different error with different causes.

Most likely cause

Data folders inside the DeepCharts database directory were removed manually, DeepCharts is still referencing paths that no longer exist, and the folders were never regenerated because the platform was not restarted.

Quick fix

Restart DeepCharts completely so it regenerates the missing directories:

1. Close DeepCharts.
2. Verify no DeepCharts process is still running in the background: open **Task Manager**, look for DeepCharts in the process list, and if it is there, right-click it and choose **End Task**.

[SCREENSHOT PLACEHOLDER] Windows Task Manager processes list with the DeepCharts process selected and the right-click End Task option visible `task-manager-end-task-deepcharts.png`

3. Reopen DeepCharts — it automatically regenerates the required directories on startup.
4. Load the affected chart again. The error should now be resolved.

If that didn't work

Cause: The symbol's data is missing or corrupted beyond the folder structure

The restart rebuilt the folders, but the data inside is incomplete or damaged. Delete the symbol's data properly with the in-app tool and re-download it:

1. Follow Delete Market Data (In-App and Manual Methods) (Method 1, the in-app Delete Data tool).
2. If history does not refill on its own, pull it manually with Re-download Historical Data (Download Data Tool).

Cause: Wider database corruption

If path errors keep recurring across symbols, treat it as a database-level problem and work through Fix: Database Problems — up to and including rebuilding the database folder.

Still stuck

Generate a Diagnostic Report: Before You Contact Support so support can see exactly which path is failing, then contact the team via [How to Get Help \(Chat, Diagnostic Report, Support\)](#).

Prevent this

- Close DeepCharts before making any manual changes to database folders.
- Prefer the in-app Delete Data tool over manual folder deletion.
- Always restart DeepCharts after any file-level maintenance.
- Never delete data folders while a chart is actively loading.
