

Fix: Installation Setup Failed

Troubleshooting & Support | beginner | 15 min to complete | DeepCharts Help Center | August 24, 2026

While installing DeepCharts on Windows, some users hit an error dialog that reads **Installation Setup Failed**. It is typically caused by required system components that are missing or incompatible on your Windows installation — and the installer tells you exactly which one, if you know where to look.

Symptom

- The DeepCharts installer stops with an **Installation Setup Failed** error window.
- The error window includes a **Log File** button that opens a detailed log of what failed.

[SCREENSHOT PLACEHOLDER] The Installation Setup Failed error dialog during DeepCharts installation with the Log File button visible and highlighted `installation-setup-failed-dialog.png`

Not to be confused with:

- Fix: Installation Problems and Basic Requirements — the installer fails or disappears without this specific error dialog.
- Fix: Application Control Policy Blocks DeepCharts — Windows reports "An Application Control policy has blocked this file".

Most likely cause

A required system component is missing or incompatible — most commonly the Microsoft Visual C++ Redistributable. The installer log identifies the exact failure, so read it first.

Quick fix

1. Click the **Log File** button in the installation error window and review the logged details — they identify the cause of the failure. Keep this file; support will ask for it if you need help later.

[SCREENSHOT PLACEHOLDER] The installer log file open in Notepad with the failure lines near the end of the log visible `installer-log-file-notepad.png`

2. Download and install the latest **Microsoft Visual C++ Redistributable** for your system architecture — DeepCharts requires the latest version to function correctly:

Architecture	Download link	Notes
ARM64	https://aka.ms/vc14/vc_redist.arm64.exe	Latest supported ARM64 version
X86 (32-bit)	https://aka.ms/vc14/vc_redist.x86.exe	Required even on some 64-bit systems
X64 (64-bit)	https://aka.ms/vc14/vc_redist.x64.exe	Includes both ARM64 and X64 binaries

3. Restart your PC. This step is not optional — Windows only finishes registering system components after a reboot.
4. Run the DeepCharts installer again.

If that didn't work

Cause: Windows system language is not English

DeepCharts and its dependencies require the Windows system language to be set to **English**. On systems with a non-English language, the installer may fail in unexpected ways.

1. Open **Windows Settings** → **Time & Language** → **Language** and set the Windows display and system language to **English**.

[SCREENSHOT PLACEHOLDER] Windows Settings Time & Language page with the Windows display language dropdown open and English selected windows-language-english-setup.png

2. Restart your PC.
3. Run the DeepCharts installer again.

Cause: Graphics rendering (SlimDX) issue

DeepCharts uses SlimDX for graphical rendering. In rare cases, a system-level graphics or DirectX issue prevents the installation from completing. There is no targeted in-place fix for this one — your options are:

- **Option 1:** Install DeepCharts on another Windows machine, if one is available.
- **Option 2:** Perform a fresh Windows installation, install all system updates and the required components above, then reinstall DeepCharts.

Warning: A fresh Windows installation erases the programs and settings on that PC. Back up your files first, and treat this as the last resort after every other cause is ruled out.

Still stuck

Collect the installer log file (the **Log File** button in the error window), then contact support through How to Get Help (Chat, Diagnostic Report, Support) and attach the log so the team can investigate the exact failure. If DeepCharts partially installed and launches, also include a Diagnostic Report: Before You Contact Support.

Prevent this

- Always restart your PC after installing system dependencies, before running the DeepCharts installer.
- Avoid running multiple installers at the same time.
- Keep Windows and your graphics drivers up to date.
- Follow How to Install DeepCharts and Activate Your License for the full, correctly-ordered installation procedure, and check System Requirements first on a new machine.
