

Keyboard Shortcuts Reference

Charts & Workspace | beginner | 5 min read | DeepCharts Help Center | August 24, 2026

This page lists the default keyboard shortcuts that ship with DeepCharts, grouped the same way as the in-app **Shortcuts** table. Keep it open while you learn the platform — the handful of combinations for mouse modes, drawing tools and workspaces cover most day-to-day work.

Every shortcut is re-mappable, so if your combinations differ from this page, someone changed them in **Options** → **Settings** → **Shortcuts**. See [How to Configure Keyboard Shortcuts](#) for how to change or restore a binding.

What it is

DeepCharts binds key combinations to platform actions (workspaces, screenshots) and chart actions (mouse modes, drawing tools, trading toggles). The authoritative list is the **Shortcuts** tab in **Options** → **Settings** — it holds roughly 70 bindable actions, organized by **Category** (**General** or **Chart**) and **Type** (**Action**, **Control**, **Drawing and Annotation**, **Scroll**, **Trading**). This page documents the default combinations for the most-used entries; actions not listed here can be looked up (and bound) in the same tab.

When to use it

- You want to work faster on charts without hunting through the right-click menu
- You pressed something by accident and need to identify what it triggered
- You are about to re-map keys and want to know what the defaults were
- You switched from another platform and want to compare conventions before re-mapping

Quick start

1. Learn the five chart mouse modes first (**Alt P** / **Alt C** / **Alt G** / **Alt H** / **Alt R**) — they replace the most frequent toolbar clicks.
2. Add the drawing tools you use daily (for example **Shift H** for a horizontal line, **Shift R** for a rectangle).
3. Save your layout with **Ctrl Alt S** (**Workspace save**) at the end of every session — DeepCharts does not auto-save layouts.
4. To change any binding, open **Options** → **Settings** → **Shortcuts**, click **Register** on the row, press the new keys, then click **Save Settings** (full walkthrough).

Settings reference

Chart shortcuts act on the focused chart window. Many of them are also shown next to their commands in the chart right-click menu, so the menu doubles as an in-app reminder.

[SCREENSHOT PLACEHOLDER] Chart right-click context menu open, with the hotkeys visible next to the entries (Pointer Alt P, Crosshair Alt C, Trading Enabled Ctrl Alt T, Indicators Ctrl I, Properties Ctrl P)
chart-context-menu-hotkeys.png

General (platform-wide)

Action	Default combination
Workspace open	Ctrl Alt O

Action	Default combination
Workspace save	Ctrl Alt S
Workspace close	Ctrl Alt C
Workspace next	Ctrl Alt +
Workspace previous	Ctrl Alt -
Reset open windows	Ctrl Alt R
Take screenshot	Ctrl Alt I
Replay Play/Pause	[CONFIRM: default combination — none captured]

Chart — mouse modes (Control)

Action	Default combination
Pointer	Alt P
Crosshair	Alt C
Global Crosshair	Alt G
Hand	Alt H
Zoom Range	Alt R
Crosshair Window	[CONFIRM: default combination — none captured]

Chart — actions

Action	Default combination
Indicators	Ctrl I
Properties	Ctrl P
Rebuild chart	Ctrl R
Change symbol	Ctrl C
Change timeframe	Space
Annotation snap	Ctrl S
Annotation import / export / hide-show / erase all	[CONFIRM: default combinations — none captured]

Chart — drawing tools (Drawing and Annotation)

Drawing tool	Default combination
Horizontal Line	Shift H
Line	Shift L
Parallel Lines	Shift P
Rectangle	Shift R
Text	Shift T
Price Retracement (Fibonacci retracement)	Shift F
Volume Profile	Shift V
Buy calculator	Shift B
Sell calculator	Shift S

Vertical Line, Horizontal Ray, Ruler, Ellipse, Pencil, Price Projection, Price Fan and VWAP show no combination in the chart's **Drawing Objects** menu and appear to ship unbound. [CONFIRM: whether these drawing tools have default bindings] You can bind any of them yourself from the **Shortcuts** tab.

Chart — trading

Action	Default combination
Trading Enabled	Ctrl Alt T
Show Trading Panel	Ctrl Alt P
Show Historical Orders	Ctrl Alt H

Note: The **Scroll** type also exists in the Shortcuts tab for navigation and scrolling functions. **[CONFIRM: default Scroll bindings — none captured]**

Tips and common mistakes

- **Ctrl C on a chart changes the symbol — it does not copy.** This is the single most surprising default for new users. If you keep triggering the instrument picker while trying to copy, either get used to it or re-map **Change symbol**.
- **Space changes the timeframe.** Pressing the spacebar with a chart focused opens the timeframe selection, which can feel accidental at first.
- **Alt C vs Ctrl Alt C.** Alt C switches the chart cursor to crosshair; adding Ctrl closes the current workspace. If your layout "disappeared" after a fat-fingered crosshair attempt, this is why — reopen it with Ctrl Alt O.
- **Make Ctrl Alt S a habit.** DeepCharts does not auto-save chart layouts; **Workspace save** is the difference between your setup surviving a restart or not. See Templates and Workspaces.
- **Chart shortcuts need chart focus.** Click the chart first — a Chart-category combination pressed while another window is focused does nothing.
- **This page shows defaults.** All combinations are re-mappable, so a teammate's platform (or a platform configured months ago) may differ. The **Shortcuts** tab is always the source of truth for the machine in front of you.
