

Connect Any Rithmic Prop-Firm Account (Server Table)

Connections & Data Feeds / Setup | beginner | 15 min to complete | DeepCharts Help Center | August 24, 2026

Every Rithmic prop-firm account connects to DeepCharts the same way — the only thing that differs between firms is the **Server** value you select. By the end of this guide your prop-firm feed will be connected and charts will be streaming live.

Evaluation and Funded accounts use the identical flow — there is no separate funded-only setup.

Note: Apex Trader Funding has its own dedicated walkthrough: [Connect Apex Trader Funding](#). If your prop firm issued you a dxFeed account instead of Rithmic (MyFundedFutures, Aqua Futures, Goat Funded Futures and others), follow [Connect a Prop-Firm dxFeed Account \(MFF, Aqua, Goat...\)](#).

Before you start

- [] An active prop-firm account (Evaluation or Funded — both connect the same way) — purchase it from your firm first if you have not
- [] The Rithmic username and password your firm issued you. These come in the firm's welcome email and are **not** the same as your login for the firm's website — see [Fix: Connection Failed — Check Username and Password](#) for why this matters
- [] R Trader Pro installed for signing the market data agreement — see [Sign Your Market Data Agreement](#)
- [] DeepCharts installed and activated — see [How to Install DeepCharts and Activate Your License](#)
- [] Confirmed your firm is supported — see [Supported Brokers, Prop Firms and Data Feeds](#)

Warning: Not every prop firm can be connected. TopStep, FTMO and FundedNext Futures do not issue credentials usable with DeepCharts. Prop-firm CQG accounts work only when the firm issues the CQG account directly from CQG — a CQG account that comes through Tradovate or NinjaTrader cannot be connected (see [How to Connect CQG \(AMP, Optimus, EdgeClear, Ironbeam...\)](#)).

Steps

1. Find your firm's **Server** value in the table below. You will use this same value twice: as the **System** in R Trader Pro when signing the agreement, and as the **Server** in DeepCharts Feed Settings.

Prop firm	Server value
Apex Trader Funding (see Connect Apex Trader Funding)	Apex
4PropTrader	4PropTrader
10X Futures	10XFutures
Bulenox	Bulenox
DayTraders.com	DayTraders.com
Earn2Trade	Earn2Trade
FundedFuturesNetwork	FundedFuturesNetwork
Legends Trading	LegendsTrading
Lucid Trading	LucidTrading
MES Capital	MES Capital
PropShopTrader	PropShopTrader
The Trading Pit	TheTradingPit

Prop firm	Server value
Thrive Trading	ThriveTrading
TradeFundrr	TradeFundrr
Tradeify	Tradeify [CONFIRM: exact spelling of the Tradeify entry in the Server dropdown]
tradesea	tradesea (lowercase in the dropdown)
BlueSky Trading (Rithmic accounts)	Rithmic Paper Trading
OneUpTrader	Rithmic Paper Trading
TakeProfitTrader	Rithmic Paper Trading
Any other Rithmic prop firm	Rithmic Paper Trading

Tip: Watch the spelling — the correct firm name is "Bulenox" (often mistyped as "Bluenox") and the server entry is "TradeFundrr" with no second "e".

If your firm is not in the Server dropdown

Select **Rithmic Paper Trading** — that is Rithmic's default server for data-feed-only and smaller prop accounts. Use it in both R Trader Pro and DeepCharts. Despite the name, the data is real and live.

2. Sign the Rithmic market data agreement in R Trader Pro. Without it, the connection stays red even with correct credentials. Download R Trader Pro from <https://www.rithmic.com/rtraderpro> (click **Download R | Trader Pro**), open it, and fill **both** side-by-side login forms with the same values: **System** = your firm's server value from the table, **Gateway** = the location nearest to you, and the Rithmic username and password from your firm's welcome email. Click **Login**, select your market data status when prompted (retail traders normally select **Non-Professional**), then read and accept the agreements. Full details in Sign Your Market Data Agreement.

[SCREENSHOT PLACEHOLDER] R Trader Pro login screen with both forms filled, the System dropdown open showing prop-firm server entries, and the Gateway field visible  dc-en-connect-rithmic-prop-firm-01.png

3. First-time setup only: while in R Trader Pro, open **Window** → **Preferences** → **Performance** and drag both sliders — **Quotes** and **Order Book** — to the maximum, then click **Apply** and **OK**. This removes Rithmic's data-receive limit; with a limit set, charts can lag during high-volume market periods. Close R Trader Pro when done.

[SCREENSHOT PLACEHOLDER] R Trader Pro Preferences Performance tab with both Quotes and Order Book sliders at maximum  dc-en-connect-rithmic-prop-firm-02.png

4. In DeepCharts, click **Select Connection** in the top toolbar, then **Feed Settings** at the bottom of the dropdown.
5. Click **Add Connection** and fill in the form:

Field	What to enter
Name	Any label, for example "MyFirm Eval" or "MyFirm Live".
Feed Source	Rithmic RAPI (the dropdown also shows Rithmic Wss - beta — pick RAPI).
Username	The Rithmic username from your firm's welcome email — not the firm's website login.
Password	The Rithmic password from the same email.
Server	Your firm's value from the table in step 1 — exactly as written.
Gateway	Automatic (default), or the region nearest to you for lower latency.

Leave all other fields as they are. Try the interactive Feed Settings mock below — switch the Feed Source to Rithmic and watch the Server field appear:

[WIDGET: feed-navigator]

Tip: If old or expired prop accounts clutter your account list, enable the **Show only active accounts** toggle in the LOGIN INFO section of Feed Settings.

6. Click **Save**.

7. Click **Select Connection** again and click your new feed to connect.

8. Route your exchanges to the feed: open **Options** → **Symbol Manage** and confirm the exchanges you trade are subscribed and mapped to this connection (the chain-link icon on a row changes its feed). Try it in the mock below — click the chain-link icon on a row to cycle its mapped feed. Full walkthrough in Symbol Manage: Subscribe Exchanges and Map Your Feed.

Verify it worked

- The connection indicator turns **green** within about 10 seconds of connecting.
- Open **New** → **Price Chart**, pick a symbol your account covers (for example ES or NQ), and confirm the price is updating live.

Once charts are loading you can place orders through the Trading Panel at the bottom-right of the chart by selecting your prop-firm account — see Trading from the Chart.

If something went wrong

The three causes below account for nearly all failed prop-firm connections, in this order:

1. **Wrong credentials** — you entered the firm's website login instead of the Rithmic credentials from the welcome email. See Fix: Connection Failed — Check Username and Password.
2. **Agreement not signed** — the market data agreement was never accepted inside R Trader Pro. See Fix: Please Log In Using R Trader or R Trader Pro and Sign Your Market Data Agreement.
3. **Wrong Server value** — the Server field does not exactly match your firm's entry from the table. See Fix: Connection Failed — Bad Server.

Other symptoms:

- Dot is green but charts are not moving — Fix: Live Feed Connected but Chart Is Not Moving
- Connection failed — unable to establish connection — Fix: Connection Failed — Unable to Establish Connection
- Charts lag during busy markets — Fix: Charts Lagging or Data Delayed (Checklist) (verify Feed Source is Rithmic RAPI and the R Trader Pro sliders are at maximum)

If none of these match, collect the details support needs — see Diagnostic Report: Before You Contact Support.
