

DOM Trading on the Chart (Click-Trading Ladder)

Trading & Orders | intermediate | 10 min to complete | DeepCharts Help Center | August 24, 2026

By the end you will have the click-trading ladder active on your chart and know exactly what a left-click and a right-click in the green and red columns do.

DOM Trading overlays two vertical columns on the right edge of the price chart — a green buy column and a red sell column — so you can place orders at exact price levels with one click. Its biggest advantage over the button grid: the platform picks the correct order type (limit or stop) from the level you click, so a "buy limit above the market" mistake becomes impossible.

Before you start

- A chart open with a data feed connected — [Open Your First Chart](#), [How to Connect a Data Feed \(Feed Settings\)](#)
- Trading armed on the chart (green \$ icon) and the trading panel available — [Trading from the Chart](#)
- Order quantity set in the trading panel's **Qty** field — the ladder uses it for every click
- Recommended: practice on a SIM account first — [Trading Accounts and Simulation](#)

Steps

1. In the chart's bottom bar, select the **DOM Trading** radio button. Two full-height columns appear at the right edge of the chart — a green buy column and a red sell column — with a **D:** label at the top and orange **CANCEL ALL / FLAT ALL** buttons at the bottom.

[SCREENSHOT PLACEHOLDER] Price chart with DOM Trading enabled — green buy column and red sell column at the right edge, the D: 0.00 \$ label at the top of the ladder and the orange CANCEL ALL and FLAT ALL buttons at the bottom, with the bottom-bar DOM Trading radio highlighted [dc-en-dom-trading-chart-01.png](#)

2. Set your size in the trading panel's **Qty** field. Each ladder click submits this quantity.
3. To buy, left-click the **green** column at the price you want. The platform picks the order type from where the level sits relative to the current price:

You click	Order placed
Green column below the current price	Buy Limit
Green column above the current price	Buy Stop
Red column above the current price	Sell Limit
Red column below the current price	Sell Stop

To sell, do the same in the **red** column. This auto-selection means the order always lands on the correct side of the market.

Get a feel for the level logic on the live ladder below — sell limits sit violet above the market, buy limits green below it; hover any level to see why that side gets that order type.

4. To trade at market, **right-click** in the column: right-click in the green column sends a Buy Market order, right-click in the red column sends a Sell Market order, regardless of the level (default behavior).
5. Manage working orders directly on the ladder: **left-click** an existing order to move it to another level, **right-click** it to cancel.
6. Read the ladder readouts. The **D:** label at the top of the ladder is your profit-and-loss readout for the position. If your feed provides Level 2 depth, the ladder also shows the resting liquidity at each price level — zoom in on the chart to see the numbers. With Level 1 data only the best bid and ask are shown.

7. Use the orange emergency buttons at the bottom of the ladder: **CANCEL ALL** cancels working orders, **FLAT ALL** closes positions.

Warning: Whether **CANCEL ALL** and **FLAT ALL** act on the panel's symbol only or on all symbols and accounts is not confirmed — exact scope may vary. **[CONFIRM: scope of the ladder's CANCEL ALL / FLAT ALL buttons — panel symbol only, or all symbols/accounts]** Until you have verified it on a SIM account, treat them as platform-wide kill switches.

If you want to customize the ladder

Open the dropdown menu next to the **DOM Trading** radio in the bottom bar:

- **Enable Chart Trading** — toggles chart-based order placement itself.
- **Chart Trading Width** — defines the width of the Chart DOM columns.
- **Trading Colors** — customize the column colors.
- **Line Bid/Ask** — show or hide the bid/ask line.
- **DOM Settings** — show the depth of market with color customization.
- **Text Settings** — enable on-chart text and adjust its color and appearance.

[SCREENSHOT PLACEHOLDER] The DOM Trading dropdown menu open in the chart bottom bar showing Enable Chart Trading, Chart Trading Width, Trading Colors, Line Bid/Ask, DOM Settings and Text Settings `dc-en-dom-trading-chart-03.png`

If you want brackets attached to ladder entries

Enable the **OCO Strategy** block in the trading panel before clicking — entries get an automatic stop and target. See OCO (One-Cancels-the-Other) Strategies.

Verify it worked

Left-click the green column a few ticks below the current price on a SIM account: a Buy Limit appears at that level on the ladder and in the Orders Window. Drag it one level — it moves. Right-click it — it cancels. After a filled test trade, the **D:** label updates with your P/L.

If something went wrong

Symptom	What to do
Clicks in the columns do nothing	Check Trading Enabled (green \$ icon) and the Enable Chart Trading toggle in the DOM Trading dropdown — Trading from the Chart
No liquidity numbers in the ladder	Your feed delivers Level 1 only — the ladder needs Level 2 data to show per-level resting liquidity; also try zooming in so the rows are tall enough for the numbers
Order placed with the wrong size	The ladder uses the trading panel's Qty field — check it before clicking
Orders blocked after several fast clicks	The Frequency Limitation safety in Options → Settings → General → Trading paused submissions — see Trading Panel Reference: Every Button and Field
Chart is not updating at all	Fix: Live Feed Connected but Chart Is Not Moving
