

How to Connect CQG (AMP, Optimus, EdgeClear, Ironbeam...)

Connections & Data Feeds / Setup | beginner | 10 min to complete | DeepCharts Help Center | August 24, 2026

By the end you will have your CQG account connected to DeepCharts and charts loading live data. CQG accounts are issued by futures brokers — AMP Futures, EdgeClear, Ironbeam, Phillips Capital and Optimus Futures all work — and CQG is one of the fastest feeds to set up because there is no separate market data agreement to sign first.

One compatibility rule matters before you begin: DeepCharts can only connect CQG accounts that were issued **directly by CQG** — either through one of the brokers above, or by a prop firm that issues its CQG accounts straight from CQG. A CQG account that comes through Tradovate or NinjaTrader cannot be connected at all. If you are unsure which kind you have, check Supported Brokers, Prop Firms and Data Feeds or ask your broker.

Before you start

- Confirm your broker or account type is supported — Supported Brokers, Prop Firms and Data Feeds
- Have your CQG username and password ready (from your broker's welcome email — not your broker website login)
- DeepCharts installed and activated — How to Install DeepCharts and Activate Your License

Steps

1. In the DeepCharts main bar, click **Select Connection** → **Feed Settings**.

[SCREENSHOT PLACEHOLDER] DeepCharts main bar with the Select Connection dropdown open and the Feed Settings entry highlighted  dc-en-connect-cqg-01.png

2. Click **Add Connection**. A blank connection form appears.
3. In **Name**, type a label you will recognize later, for example "AMP CQG".
4. In **Feed Source**, select **CQG**. You can explore how the Feed Settings form behaves in the interactive mock below — changing the Feed Source changes which fields appear:

[WIDGET: feed-navigator]

5. Enter your CQG **Username** and **Password**. These are the CQG credentials from your broker, not your login for the broker's website.
6. Check **Use demo credentials** only if you are connecting a CQG demo account. For a live account, leave it disabled. A mismatch here (a live account with the box checked, or a demo account with it unchecked) is a common reason the connection fails even though the credentials are correct.
7. Optionally, enable **Connect on startup** if you want DeepCharts to connect this feed automatically every time the app opens.
8. Leave every other field at its default and click **Save**.

[SCREENSHOT PLACEHOLDER] Completed CQG connection form showing Name, Feed Source=CQG, Username filled, Use demo credentials unchecked, Connect on startup visible, with the Save button highlighted  dc-en-connect-cqg-02.png

9. Back in the main bar, click **Select Connection** and click your new CQG feed. The connection dot should turn green within about 10 seconds.

10. Open **Options** → **Symbol Manage** and route the exchanges you trade to this CQG feed. This step is required — without it charts show no data. Try the interactive mock below — click the chain-link icon on a row to change its feed. See [Symbol Manage: Subscribe Exchanges and Map Your Feed](#) for the full walkthrough.

11. Open a chart to confirm data is flowing — see [Open Your First Chart](#).

If you have a prop-firm CQG account

Prop-firm CQG accounts work only when the firm issues the account directly from CQG. If your prop firm delivers CQG through Tradovate or NinjaTrader, that account cannot connect to DeepCharts — you would need the firm's Rithmic or dxFeed account instead. For example, Goat Funded Futures offers CQG through another platform, so only their dxFeed account works with DeepCharts.

If you plan to use order-flow indicators heavily

CQG does not provide MBO (market-by-order) data, and while it provides full market depth for ES, it does not provide full depth for NQ. If per-order data quality matters for your workflow (the Deep order-flow indicators, for instance), consider a Rithmic or dxFeed feed instead — see [How to Connect a Rithmic Data Feed](#) and [How to Connect a dxFeed Data Feed](#).

Verify it worked

- The status dot next to your CQG connection is green.
- A chart on an exchange you routed in **Symbol Manage** shows live, moving prices.

If something went wrong

Symptom	What to do
Red dot, username/password error	Re-check credentials, then verify the Use demo credentials box matches your account type — see Fix: Connection Failed — Check Username and Password
Red dot, cannot establish connection	Firewall or network is blocking CQG — see Fix: Connection Failed — Unable to Establish Connection
Green dot but chart is frozen or empty	Exchange not routed to this feed — see Fix: Live Feed Connected but Chart Is Not Moving and Symbol Manage: Subscribe Exchanges and Map Your Feed
