

Connect Apex Trader Funding

Connections & Data Feeds / Setup | beginner | 15 min to complete | DeepCharts Help Center | August 24, 2026

By the end of this guide your Apex Trader Funding account will be connected to DeepCharts with live charts on screen. Evaluation and Funded accounts use the identical process — there is no separate funded-only flow.

Note: DeepCharts supports Apex **Rithmic** accounts only. Any CQG, dxFeed or IBKR account variants Apex may offer cannot be connected.

Before you start

- [] An active Apex Rithmic account (Evaluation or Funded). If you do not have one yet, purchase it from Apex Trader Funding first, then return here
- [] Your Apex-issued **Rithmic** username and password. These arrive in the Apex welcome email and are **not** the same as your Apex website login — see Fix: Connection Failed — Check Username and Password for why mixing them up is the number-one cause of failed connections
- [] DeepCharts installed and activated — see How to Install DeepCharts and Activate Your License
- [] R Trader Pro, which you will install in step 1 to sign the market data agreement — see Sign Your Market Data Agreement for background

Tip: Cannot find your Rithmic credentials? Search your inbox for "Rithmic" in emails from Apex — the welcome email contains them, and they look different from your Apex website login.

Steps

Part A — Sign the agreement in R Trader Pro

The Rithmic market data agreement must be signed before DeepCharts can connect. Without it, the connection dot stays red even with correct credentials.

1. Go to <https://www.rithmic.com/rtraderpro> and click the **Download R | Trader Pro** button, then run the installer with default options.
2. Open R Trader Pro. The login screen shows **two login forms side by side** — this is normal. Fill **both** forms with the same values:
 - **System:** select **Apex**
 - **Gateway:** select the location nearest to you (Chicago, Europe, Singapore, and so on) — a far-away gateway works but adds latency
 - **Username / Password:** your Rithmic credentials from the Apex welcome email

Note: The System field and the Server field are different fields — the Server field also lists Apex alongside Paper Trading. For signing the agreement, what matters is **System = Apex**.

3. Click **Login**. When prompted for your market data status, retail traders normally select **Non-Professional**.
4. Read and accept the market data agreement that appears. If you closed R Trader Pro before the prompt appeared, log back in — the prompt will reappear.

5. First-time setup only: open **Window** → **Preferences** → **Performance** and drag both sliders — **Quotes** and **Order Book** — to the maximum, then click **Apply** and **OK**. This removes Rithmic's data-receive limit, which otherwise delays charts during high-volume market periods.

[SCREENSHOT PLACEHOLDER] R Trader Pro Preferences window, Performance tab, Quotes and Order Book sliders both at maximum `rtrader-apex-performance-sliders.png`

6. Close R Trader Pro. The agreement is now stored on Rithmic's side — you do not need R Trader Pro running while using DeepCharts.

Part B — Connect in DeepCharts

7. In DeepCharts, click **Select Connection** in the top toolbar, then click **Feed Settings** at the bottom of the dropdown.

[SCREENSHOT PLACEHOLDER] DeepCharts top toolbar with the Select Connection dropdown open and Feed Settings highlighted at the bottom `apex-select-connection-menu.png`

8. Click **Add Connection** and fill in the form:

Field	What to enter
Name	Any label you will recognize, for example "Apex Live" or "Apex Eval".
Feed Source	Rithmic RAPI — the dropdown also shows a Rithmic beta option; pick RAPI.
Username	Your Rithmic username from the Apex welcome email — not your Apex website login.
Password	Your Rithmic password from the same email.
Server	Apex — not Paper Trading or any other entry.
Gateway	The location nearest to you (for example Chicago Area, Europe, Singapore).

Leave all other fields in the form as they are. Use the interactive Feed Settings mock below to see how the form works — pick Rithmic as the Feed Source and the Server field appears:

[WIDGET: feed-navigator]

Warning: The Server dropdown contains multiple options including Paper Trading. For Apex it must be exactly **Apex** — selecting Paper Trading here is the second most common cause of a red connection dot, right after wrong credentials.

9. Click **Save**.

10. Back in the main toolbar, click **Select Connection** again. Your new Apex feed appears in the dropdown under the name you gave it — click it to connect.

11. Route your exchanges to the feed: open **Options** → **Symbol Manage** and make sure the exchanges you trade (for example CME for ES and NQ) are subscribed and mapped to the Apex connection — the chain-link icon on a row changes which feed it loads from. If this step is skipped, charts either show no data or load old cached data and appear frozen, which is the single biggest cause of "charts not moving" reports. Try it in the interactive mock below — click the chain-link icon to cycle a row's feed. Full walkthrough in Symbol Manage: Subscribe Exchanges and Map Your Feed.

Verify it worked

- Within about 10 seconds of connecting, the connection dot turns **green**.
- Open a chart (**New** → **Price Chart**, pick ES or NQ) and confirm the price is updating live.

If a chart was already open while you fixed Symbol Manage and it still looks frozen, close it and re-open it via **New** → **Price Chart** — it will reload from the correctly-routed feed.

Once charts are loading, you can place orders through the Trading Panel at the bottom-right of the chart by selecting your Apex account in the panel's fields — see Trading from the Chart.

If something went wrong

If the dot stays red, check these in order — they cover almost every case:

1. **Wrong credentials** — you used your Apex website login instead of the Rithmic credentials from the Apex welcome email. This is the most common cause. See Fix: Connection Failed — Check Username and Password.
2. **Agreement not signed** — the market data agreement was never accepted inside R Trader Pro. See Fix: Please Log In Using R Trader or R Trader Pro and Sign Your Market Data Agreement.
3. **Wrong Server** — the Server field must be exactly **Apex**, not Paper Trading. See Fix: Connection Failed — Bad Server.
4. **Firewall or antivirus blocking Rithmic** — see Fix: Connection Failed — Unable to Establish Connection.

Other symptoms:

- Dot is green but charts are not moving or show no data — Fix: Live Feed Connected but Chart Is Not Moving (re-check Symbol Manage first)
- Charts lag behind during busy markets — Fix: Charts Lagging or Data Delayed (Checklist) (verify Feed Source is Rithmic RAPI and the R Trader Pro Performance sliders are at maximum)

Still red after all four checks? Open **Options** → **Show Logs** in DeepCharts, copy any error messages, and include them when you contact support — see Diagnostic Report: Before You Contact Support and How to Get Help (Chat, Diagnostic Report, Support).
