

How to Connect a Data Feed (Feed Settings)

Connections & Data Feeds / Setup | beginner | 10 min to complete | DeepCharts Help Center | August 24, 2026

By the end you will have your data feed saved in Feed Settings, connected with a green dot, and a chart loading live data. This is the generic walkthrough that applies to every feed source — provider-specific guides (How to Connect a dxFeed Data Feed, How to Connect a Rithmic Data Feed, How to Connect CQG (AMP, Optimus, EdgeClear, Ironbeam...) and others) follow the same shape with their exact values filled in.

Before you start

- Your feed credentials (username and password issued for the feed — not your provider's website login). If you have no feed yet, see How to Buy a Data Feed and Get Your Credentials or start with the Use the Free 15-Minute Delayed Data Feed.
- The market data agreement signed for your account type — see Sign Your Market Data Agreement. Without it the connection stays red even with correct credentials.
- The exact **Feed Source** and **Server** values for your provider — look them up in Supported Brokers, Prop Firms and Data Feeds.

Steps

1. In DeepCharts, click **Select Connection** in the main toolbar.
2. Click **Feed Settings** at the bottom of the dropdown. The Feed Settings window opens.

3. Click **Add Connection**. A form with several fields appears.
4. In **Name**, type any name you will recognize later — for example "Apex Eval" or "My dxFeed". This is only a label; it appears in the Select Connection dropdown.
5. In **Feed Source**, pick the source that matches your account:

Your account	Feed Source
dxFeed bought from the DeepCharts website or from dxfeed.com	dxFeed
dxFeed from a prop firm (MFF, Aqua, Goat...)	dxFeed Prop
Any Rithmic account (prop firm, broker, website purchase)	Rithmic RAPI
CQG account from a broker or directly from CQG	CQG
Free built-in delayed feed	15 min delayed
DeepCharts Competition account	V-Sim
Interactive Brokers	IBKR (TWS API)

Note: The Rithmic dropdown entries are **Rithmic RAPI** and **Rithmic Wss - beta** — there is no plain "Rithmic" option. Pick **Rithmic RAPI**; it is the recommended source.

Try the same form live below — pick each Feed Source and watch the fields morph to match it.

6. Enter your **Username** and **Password**.

Warning: These are the credentials issued for the feed itself, usually delivered in a welcome email from your broker or prop firm. They are not the login for the provider's website or dashboard — using the website login is the single most common cause of a failed connection.

7. If a **Server** field appears, set it to the exact value for your provider from Supported Brokers, Prop Firms and Data Feeds. Rithmic prop firms each have a named entry (for example "Apex"); firms without one use "Rithmic Paper Trading"; broker Rithmic accounts use "Rithmic 01"; website-bought dxFeed uses "Website Account". When Feed Source is **dxFeed Prop** no Server field exists — that is normal.

If you picked Rithmic RAPI

- Set **Gateway** to the region closest to you. The options are Automatic, Chicago Area, Seoul, Mumbai, Hong Kong, Sao Paolo, Singapore, Sydney, Tokyo, Frankfurt, Europe, Cape Town, NYC Area and US West; the default is Automatic. A distant gateway still works but adds latency.
- **Include commissions** is on by default — it shows commissions in your P/L.
- Enable **Show only active accounts** if old or expired prop accounts clutter your account list.
- Leave the **Use R Trader** button alone unless you want to run R Trader alongside DeepCharts on the same feed — that setup is covered in Connect Rithmic Using the RTrader Pro Plugin.

If you picked dxFeed or dxFeed Prop

- Set **DOM Type** to **MBO** or **MBP**. MBO delivers full market-by-order Level 2 depth (best for orderflow tools); MBP is much lighter data and is the right choice if your connection is slow or charts lag during busy periods.

If you picked CQG

- Enable **Use demo credentials** only if you have a CQG demo account; leave it off for a live account.
- Enable **Connect on startup** if you want this feed to connect automatically every time DeepCharts opens.

8. Leave every other field at its default and click **Save**.

9. Back in the main toolbar, click **Select Connection** again — your new feed now appears under the name you gave it. Click it to connect. Within about 10 seconds the connection indicator should turn green.

[SCREENSHOT PLACEHOLDER] Select Connection dropdown showing the newly saved feed with a green status dot next to it `feed-connected-green-dot.png`

10. Disconnect the feed (click it again), then set up your exchanges in **Options** → **Symbol Manage** — follow Symbol Manage: Subscribe Exchanges and Map Your Feed. This step routes each exchange to your new feed; skipping it is the biggest cause of "connected but charts not moving" tickets.

11. Reconnect the feed, then open a chart via **New** → **Price Chart** — see Open Your First Chart.

Verify it worked

- The dot next to your connection in **Select Connection** is green.
- A chart opened on a subscribed exchange draws candles and the price updates (live, or with a 15-minute lag if you chose the delayed feed).

If something went wrong

Symptom	See
Dot stays red — "check username and password"	Fix: Connection Failed — Check Username and Password
Dot stays red — "bad server"	Fix: Connection Failed — Bad Server
Dot stays red — "unable to establish connection"	Fix: Connection Failed — Unable to Establish Connection
Rithmic asks you to log in using R Trader	Fix: Please Log In Using R Trader or R Trader Pro

Symptom	See
Dot is green but the chart does not move	Fix: Live Feed Connected but Chart Is Not Moving
Charts lag behind during busy periods	Fix: Charts Lagging or Data Delayed (Checklist)

Note: If you also run DeepDom, both applications share one data bridge — a single connection serves both at the same time, but the feed settings must be entered identically in both applications. Mismatched settings in one application can stop the other from connecting.
