

Fix: Connection Failed — Bad Server

Connections & Data Feeds / Troubleshooting | beginner | 10 min to complete | DeepCharts Help Center | August 24, 2026

The "Bad Server" error originates from dxFeed, not from DeepCharts itself. It signals a market data authorization or account usage restriction on dxFeed's side — in practice, either your dxFeed account is already in use on another platform, or its Market Data Agreement has not been signed yet.

Symptom

When connecting a dxFeed data feed, the connection fails with:

Connection Failed: Bad Server

[SCREENSHOT PLACEHOLDER] The connection error dialog showing the "Bad Server" message after a failed dxFeed connection attempt `dxfeed-bad-server-error.png`

Not to be confused with:

- Fix: Connection Failed — Check Username and Password — a Rithmic credentials error, unrelated to dxFeed.
- Fix: Connection Failed — Unable to Establish Connection — a network-level failure, typically VPN or system-component related.
- Fix: dxFeed DATA_ACCESS_SUSPENDED — a different dxFeed authorization error with its own message.

Most likely cause

The same dxFeed account is logged in on another platform at the same time — dxFeed enforces only one active connection per account, and a second login is rejected.

Quick fix

1. Close any other trading or charting platform that is logged in with the same dxFeed credentials — including a session left running on another computer, if any.
2. Make sure the account is now in use on one platform only.
3. Restart DeepCharts.
4. Try connecting the feed again.

Note: The single-active-session limitation applies universally — you cannot run the same dxFeed account in DeepCharts and another platform simultaneously.

If that didn't work

Cause: Market Data Agreement not signed

dxFeed blocks access until the Market Data Agreement for the account has been signed. How you sign it depends on where the account came from:

If you purchased the data feed directly:

1. Log into your data provider's portal.
2. Sign the Market Data Agreement, selecting **Non-Professional** status when applicable.

The full walkthrough is in Sign Your Market Data Agreement.

If the account came from a broker or prop firm:

1. Contact your broker or prop firm.
2. Ask them how to activate or sign the Market Data Agreement for your account — the exact path varies by firm.

After the agreement is signed, restart DeepCharts and reconnect the data feed.

Still stuck

Generate a Diagnostic Report: Before You Contact Support so support can see the exact rejection, then contact the team through [How to Get Help \(Chat, Diagnostic Report, Support\)](#) — mention which provider or firm issued the dxFeed account and whether the agreement is signed.

Prevent this

- Complete the Market Data Agreement immediately after the account is set up — see [Sign Your Market Data Agreement](#).
- Run the dxFeed account on one platform at a time.
- When in doubt about agreement status, verify it with your broker or provider before connecting.
- Set the feed up by following [How to Connect a dxFeed Data Feed \(or Connect a Prop-Firm dxFeed Account \(MFF, Aqua, Goat...\)\)](#) for prop-firm accounts).
