

Fix: The System Cannot Find the File Specified

Connections & Data Feeds / Troubleshooting | beginner | 10 min to complete | DeepCharts Help Center | August 24, 2026

This error appears when DeepCharts cannot locate or start the **Volumetrica Bridge**, a background component the platform requires for its data feed connections. During installation, DeepCharts automatically creates a `Volumetrica Bridge` folder, and when everything is working you will see the Volumetrica Bridge running in the background. If this error appears, the Bridge is either missing or being blocked.

Symptom

When connecting a data feed, the connection fails with:

Connection Failed: The system cannot find the file specified

[SCREENSHOT PLACEHOLDER] The connection error dialog showing the full "Connection Failed: The system cannot find the file specified" message `system-cannot-find-file-error.png`

Not to be confused with:

- Fix: Could Not Find a Part of the Path — a different "path" error related to the local database, not the Bridge.
- Fix: Connection Failed — Unable to Establish Connection — a network-level failure where the Bridge is running but the server cannot be reached.

Most likely cause

The Volumetrica Bridge is missing or blocked: either the installer failed to create the `Volumetrica Bridge` folder, or your antivirus (McAfee in particular) has quarantined `VolumetricaBridge.exe`.

Tip: If you run McAfee or another aggressive antivirus, check its quarantine first (see below) — otherwise the antivirus may quarantine the Bridge again right after you repair the installation.

Quick fix

Repair the installation so the installer recreates the missing Bridge:

1. Close DeepCharts completely.
2. Locate your original DeepCharts installer (.exe). If you no longer have it, download it again from the official source — see [How to Install DeepCharts and Activate Your License](#).
3. Run the installer and choose the **Repair** option.

[SCREENSHOT PLACEHOLDER] The DeepCharts installer window with the Repair option visible and highlighted `deepcharts-installer-repair-option.png`

4. Let the repair process finish completely.
5. Reopen DeepCharts and reconnect the data feed.

In most cases, the error is resolved after this step.

If that didn't work

Cause: McAfee quarantined `VolumetricaBridge.exe`

McAfee can incorrectly flag `VolumetricaBridge.exe` and move it to quarantine. Restore it and exclude it from future scans:

1. Close DeepCharts entirely.
2. Open McAfee Antivirus.

3. Go to **Menu** → **Quarantined Items**.

4. Find `VolumetricaBridge.exe` in the list and select **Restore**.

[SCREENSHOT PLACEHOLDER] McAfee Quarantined Items screen with `VolumetricaBridge.exe` listed and the Restore action visible `mcafee-quarantine-restore-bridge.png`

5. Add the file to the scanning exclusions: go to **Menu** → **Real-Time Scanning** → **Add File**.

6. Browse to and select `VolumetricaBridge.exe`. **[CONFIRM: default installation path of the Volumetrica Bridge folder]**

[SCREENSHOT PLACEHOLDER] McAfee Real-Time Scanning exclusions screen after `VolumetricaBridge.exe` has been added `mcafee-exclusion-bridge-added.png`

7. Close McAfee and relaunch DeepCharts.

Note: Only restore and exclude files you recognize. `VolumetricaBridge.exe` is a legitimate DeepCharts component.

Cause: A different antivirus or security policy is blocking the Bridge

Other antivirus products can quarantine the Bridge in the same way. Check your product's quarantine, restore `VolumetricaBridge.exe`, and add it to the exclusion list. If a Windows application control policy is the blocker instead, see [Fix: Application Control Policy Blocks DeepCharts](#).

Still stuck

Generate a Diagnostic Report: Before You Contact Support so support can see whether the Bridge is present and running, then contact the team via [How to Get Help](#) (Chat, Diagnostic Report, Support).

Prevent this

- Install DeepCharts with the official installer only — see [How to Install DeepCharts and Activate Your License](#).
- Do not force-close the installer during setup; an interrupted install can leave the Bridge folder missing.
- Whitelist the Volumetrica Bridge in your antivirus software so it is never quarantined again.
