

Symbol Rollover (Change Contract Month)

Data & Database | beginner | 5 min to complete | DeepCharts Help Center | August 24, 2026

Futures contracts expire. As each expiry approaches, trading activity migrates to the next contract month, and a chart that is still tracking the old contract shows thin volume and prices that no longer match your broker. By the end of this guide you will have rolled a symbol to its new front-month contract using the **Manage Rollover** window — and you will know how to undo a rollover if you pick the wrong symbol.

If you are not sure why contracts roll in the first place, read [Understanding Market Structure and Sessions](#) first — it explains the rollover cycle in plain language.

Before you start

- A data feed is already configured — you will disconnect it during the rollover, then reconnect.
- You know how to disconnect and reconnect your feed.
- You understand what a contract roll is (optional background reading).

Note: Rollover changes which contract month the symbol points to locally. It does not touch your account, your subscriptions, or your broker settings.

Steps

1. Close the price chart for the symbol you want to roll (close any chart window that uses it).
2. Disconnect from your data feed.
3. Go to **Options** → **Symbols Rollover**.

[SCREENSHOT PLACEHOLDER] The Options menu open on the main DeepCharts bar with the Symbols Rollover entry highlighted `dc-en-symbol-rollover-01.png`

4. The **Manage Rollover** window opens. It has two panes: **Contracts in Roll-window** (symbols that are due to roll) and **Contracts Rolled** (symbols that have already been rolled).

[SCREENSHOT PLACEHOLDER] The Manage Rollover window showing both panes — Contracts in Roll-window with at least one symbol listed, and Contracts Rolled — with the Perform Rollover and Perform Rollback buttons visible `dc-en-symbol-rollover-02.png`

5. Click the symbol you want to roll in the **Contracts in Roll-window** pane.
6. Press **Perform Rollover**. The symbol moves to the new contract month.

If you rolled the wrong symbol

The same window includes a **Perform Rollback** button. Select the symbol in the **Contracts Rolled** pane and press **Perform Rollback** to undo the rollover and return the symbol to its previous contract month.

Verify it worked

1. Reconnect your data feed.
2. Open a new chart for the symbol.
3. The chart should now show the current front-month contract: live prices that match your broker's platform and normal trading volume. If the old chart looked "dead" — barely any volume, price drifting away from your broker — that is exactly the symptom the rollover fixes.

Tip: If you prefer not to roll manually every cycle, check the continuous-contract options in Price Chart Settings — they control how the chart stitches contract months together.

If something went wrong

Symptom	What to do	
Chart still shows old prices or stale data after the rollover	Delete the symbol's local data so it re-downloads fresh — see Delete Market Data (In-App and Manual Methods)	
Gaps appear in price around the roll date	See Fix: Gaps in Price on Charts — rollover dates are a common cause of apparent gaps	
Feed is connected but the chart is not moving at all	See Fix: Live Feed Connected but Chart Is Not Moving	
Symbol is missing or not subscribed	Check your exchange subscriptions in [[symbol-manage	Symbol Manage]]
