

How to Connect a Rithmic Data Feed

Connections & Data Feeds / Setup | beginner | 15 min to complete | DeepCharts Help Center | July 15, 2026

By the end of this guide you will have a Rithmic data feed connected to DeepCharts and a live chart on screen. The main walkthrough covers a Rithmic subscription bought from the DeepCharts website; the branch sections cover Rithmic accounts issued by a broker or carried over from another trading platform.

Note: Rithmic does not sell data feeds directly from rithmic.com. Your Rithmic credentials always come from one of four places: the DeepCharts website, a broker, a prop firm, or another trading platform. If your account came from a prop firm, follow Connect Any Rithmic Prop-Firm Account (Server Table) instead (or Connect Apex Trader Funding for Apex Trader Funding).

Before you start

Make sure you have:

- [] DeepCharts installed and activated — see How to Install DeepCharts and Activate Your License
- [] An active Rithmic subscription with its username and password — see How to Buy a Data Feed and Get Your Credentials if you have not purchased one yet
- [] The Rithmic market data agreement signed through R Trader Pro — see Sign Your Market Data Agreement (steps 2–3 below summarize the process)
- [] Checked that your account source is supported — see Supported Brokers, Prop Firms and Data Feeds

Steps

1. Get your Rithmic credentials. For a feed bought from the DeepCharts website: log in at my.deepcharts.com, open the **Subscriptions** section, and locate your Rithmic username and password. Keep them at hand — you will need them in every step that follows.

[SCREENSHOT PLACEHOLDER] DeepCharts dashboard at my.deepcharts.com with the Subscriptions section open and the Rithmic subscription row visible, credentials area highlighted (blur the actual username/password)

dashboard-subscriptions-rithmic-credentials.png

2. Sign the Rithmic market data agreement in R Trader Pro. Rithmic requires you to accept its agreements before any third-party platform can connect — with them unsigned, the connection fails even with correct credentials. Download R Trader Pro from <https://www.rithmic.com/rtraderpro> (click **Download R | Trader Pro**), install it, and open it. Fill in **both** login forms with the same values: your Rithmic username and password, **System = Rithmic Paper Trading**, and the **Gateway** nearest to you. Click **Login**, choose your market data status when prompted (retail traders normally select **Non-Professional**), then read and accept each agreement until no prompts remain. The full process is covered in Sign Your Market Data Agreement.

[SCREENSHOT PLACEHOLDER] R Trader Pro login screen showing the two side-by-side login forms, both filled identically, with System set to Rithmic Paper Trading and the Gateway dropdown visible

rtrader-login-paper-trading.png

Note: The agreements are stored on Rithmic's servers, so you do not need to keep R Trader Pro open while using DeepCharts. You only repeat this if your account resets or Rithmic introduces new mandatory agreements.

3. While you are in R Trader Pro (first-time setup only), remove Rithmic's data-receive limit: open **Window** → **Preferences** → **Performance** and drag both sliders — **Quotes** and **Order Book** — to the maximum, then click **Apply** and **OK**. With a limit set, charts can lag behind during high-volume market periods. Close R Trader Pro when done.

[SCREENSHOT PLACEHOLDER] R Trader Pro Preferences window on the Performance tab with the Quotes and Order Book sliders both dragged to the maximum position [rtrader-performance-sliders-max.png](#)

4. In DeepCharts, click **Select Connection** in the top toolbar, then click **Feed Settings** at the bottom of the dropdown. The Feed Settings window opens.

[SCREENSHOT PLACEHOLDER] DeepCharts main toolbar with the Select Connection dropdown open and the Feed Settings entry at the bottom highlighted [select-connection-feed-settings.png](#)

5. Click **Add Connection** and fill in the form:

Field	What to enter
Name	Any label you will recognize later, for example "Rithmic Live".
Feed Source	Rithmic RAPI — the recommended option.
Username	Your Rithmic username (not your DeepCharts website login).
Password	Your Rithmic password.
Server	Rithmic Paper Trading for a feed bought from the DeepCharts website.
Gateway	Automatic (the default), or the region nearest to you.

Leave every other field as it is. The **Include commissions** option is on by default — it shows commissions in your P/L.

[SCREENSHOT PLACEHOLDER] Feed Settings dialog with a new Rithmic connection form filled in — Feed Source=Rithmic RAPI, Server=Rithmic Paper Trading, Gateway=Automatic — credentials blurred [feed-settings-rithmic-rapi-filled.png](#)

Note: The Feed Source dropdown shows **Rithmic RAPI** and **Rithmic Wss - beta** — there is no plain "Rithmic" option anymore, so if an older guide mentions one, pick **Rithmic RAPI**. If charts ever feel delayed or flaky, verify you are on RAPI and not the Wss beta.

Note: "Paper Trading" is only Rithmic's server label for data-feed accounts — the data it delivers is real and live, identical to broker and prop-firm Rithmic feeds.

The Gateway dropdown offers: Automatic, Chicago Area, Seoul, Mumbai, Hong Kong, Sao Paulo, Singapore, Sydney, Tokyo, Frankfurt, Europe, Cape Town, NYC Area and US West. A far-away gateway still works but adds latency — if you are far from Chicago and data feels slow, pick the region closest to you (for example Europe or Frankfurt for EU users, Singapore or Mumbai for Asia) and reconnect.

If your Rithmic account came from a broker

For Rithmic accounts issued by AMP Futures, EdgeClear, Ironbeam, Phillips Capital or Optimus Futures, the setup is identical except the **Server** field: select **Rithmic 01** instead of Rithmic Paper Trading. Use the same value as the System field when signing the agreement in R Trader Pro.

If your Rithmic credentials came from another trading platform

Rithmic credentials issued through a different orderflow or heatmap platform (Quantower, Sierra Chart, MotiveWave, ATAS, NinjaTrader and similar) work with DeepCharts. Use **Server = Rithmic Paper Trading**, and make sure the agreement is signed in R Trader Pro with the same value in the System field.

Warning: Only Rithmic credentials carry across from other platforms this way. dxFeed credentials issued via other platforms cannot be used with DeepCharts — for dxFeed you need to buy through the DeepCharts website or directly from dxfeed.com with DeepCharts selected as the platform (see How to Connect a dxFeed Data Feed).

If your Rithmic account came from a prop firm

Follow Connect Any Rithmic Prop-Firm Account (Server Table) — each firm uses its own named Server value, listed in that article's table. Apex Trader Funding has a dedicated guide: Connect Apex Trader

Funding.

6. Click **Save**.

7. Back in the main toolbar, click **Select Connection** again — your new Rithmic feed now appears in the dropdown under the name you gave it. Click it to connect.

8. Route your exchanges to the new feed: open **Options** → **Symbol Manage** and make sure the exchanges you trade are subscribed and mapped to this Rithmic connection (the chain-link icon on a row changes which feed that exchange loads from). The instrument picker only shows exchanges you have subscribed. Full details in Symbol Manage: Subscribe Exchanges and Map Your Feed.

[SCREENSHOT PLACEHOLDER] Symbol Manage window, Subscribe List tab, showing subscribed exchanges with the data-feed column pointing at the new Rithmic connection and the chain-link icon highlighted on one row
symbol-manage-rithmic-mapping.png

9. Open a chart: click **New** in the top menu, then **Price Chart**, select an instrument (for example ES or NQ) and confirm.

Verify it worked

- Within about 10 seconds of connecting, the connection indicator turns **green**.
- The chart you opened loads candles and the price updates live.

[SCREENSHOT PLACEHOLDER] DeepCharts main toolbar showing the green connection indicator next to the Rithmic feed name, with a live ES chart updating in the background
rithmic-connected-green-dot.png

If something went wrong

Symptom	Where to go
Connection failed — check username and password	Fix: Connection Failed — Check Username and Password — the most common cause is entering a website login instead of the Rithmic credentials
Connection failed — bad server	Fix: Connection Failed — Bad Server — the Server value does not match your account source
Message asks you to log in using R Trader or R Trader Pro	Fix: Please Log In Using R Trader or R Trader Pro — the agreement step was skipped or incomplete
Indicator turns yellow with "Expert not attached"	Fix: Rithmic — Expert Not Attached
Connection failed — unable to establish connection	Fix: Connection Failed — Unable to Establish Connection
Dot is green but the chart is not moving	Fix: Live Feed Connected but Chart Is Not Moving — almost always a Symbol Manage routing issue
Charts load but lag during busy markets	Fix: Charts Lagging or Data Delayed (Checklist) — verify Feed Source is Rithmic RAPI and the R Trader Pro Performance sliders are at maximum
