

Diagnostic Report: Before You Contact Support

Troubleshooting & Support | beginner | 5 min to complete | DeepCharts Help Center | July 15, 2026

By the end you will have generated DeepCharts' built-in diagnostic report — a snapshot of your system, connectivity and platform state — and sent it to support. Attaching this report to your first message is the single best way to shorten a support conversation: it answers most of the questions support would otherwise have to ask you one by one.

Use it whenever you experience performance issues, delays, or connectivity problems that the troubleshooting articles have not resolved.

Before you start

- Have DeepCharts running, ideally shortly after the problem occurred, so the report reflects the problem state — see [How to Install DeepCharts and Activate Your License](#) if the platform will not start at all.
- Know which data feed and broker or prop firm you use — see [Supported Brokers, Prop Firms and Data Feeds](#) — so you can mention them in your message.
- If your issue is lag or delayed data, run through the checklist in [Fix: Charts Lagging or Data Delayed \(Checklist\)](#) first; it resolves many cases without a ticket.

Steps

1. Glance at the **RAM** indicator on the toolbar before you start. It shows two values: the first is total system RAM usage, and the value in brackets is DeepCharts' own memory usage. If your total RAM usage is consistently high, it may affect platform performance — worth mentioning in your support message.

[SCREENSHOT PLACEHOLDER] DeepCharts main toolbar with the RAM indicator highlighted, showing the total system RAM value and the bracketed DeepCharts memory value `toolbar-ram-indicator.png`

2. Click the **?** (question mark) icon in the toolbar.
3. Select **Contact Support**.

[SCREENSHOT PLACEHOLDER] The **?** (question mark) menu open on the DeepCharts toolbar with the Contact Support entry highlighted `question-mark-contact-support.png`

4. Choose **I have a problem or delay with the platform**.
5. Review the diagnostic window. It collects and displays: platform version, operating system, CPU details, memory statistics, network connectivity, server ping times, and download speeds.

6. Click **Click Here to Confirm** to let the platform collect additional data.
7. Click **Contact Support and Send Information** to send the results to the support team, together with a short description of your issue.

Note: No username or credentials are collected during this process. The report covers system and connectivity data only.

If support asks for log files

DeepCharts also writes daily log files that support may request for deeper analysis:

1. Open **My PC** → **Documents** → **DeepCharts** → **Logs**.
2. Identify the file support asked for. There are four log types — **General**, **Trade Copier**, **Trading** and **Various** — and each file is named with its date, for example `trading_2026-06-22`.

[SCREENSHOT PLACEHOLDER] File Explorer open at Documents > DeepCharts > Logs showing the General, Trade Copier, Trading and Various log files with date-stamped names `deepcharts-logs-folder.png`

3. Attach the file for the day the issue occurred to your support conversation.

Verify it worked

The diagnostic window completes its checks (ping times and download speeds show results rather than running), and the report is submitted after you click **Contact Support and Send Information**. **[CONFIRM: exact confirmation the app shows after the report is sent]**

When support replies, they will already have your platform version, system specs and connectivity results — expect fewer back-and-forth questions.

If something went wrong

Symptom	What to do
You cannot find the ? icon	It sits in the main toolbar; if the platform will not open at all, see Fix: Installation Problems and Basic Requirements and contact support through the website instead — see How to Get Help (Chat, Diagnostic Report, Support)
The connectivity checks fail or never finish	Your machine may be offline or blocked by security software; note the failure (screenshot it) and report through the website chat — see How to Get Help (Chat, Diagnostic Report, Support)
The problem is data lag specifically	Include the report, then follow Fix: Charts Lagging or Data Delayed (Checklist)
The problem is database errors	See Fix: Database Problems before sending — it may resolve the issue directly
