

Fix: Unable to Load DLL DXFeed_64.dll

Connections & Data Feeds / Troubleshooting | beginner | 10 min to complete | DeepCharts Help Center | July 15, 2026

This error appears when DeepCharts cannot load the dxFeed DLL file that the data feed needs to run. It is a Windows system dependency issue — not a DeepCharts software bug — and it is fixed by installing the Microsoft Visual C++ Redistributable.

Symptom

When connecting a dxFeed data feed, the connection fails with:

Connection Failed: Unable to load DLL 'DXFeed_64.dll' (Exception from HRESULT: 0x8007007E)

[SCREENSHOT PLACEHOLDER] The connection error dialog showing the full "Unable to load DLL 'DXFeed_64.dll' (Exception from HRESULT: 0x8007007E)" message [dxfeed-dll-error-message.png](#)

Not to be confused with:

- Fix: Connection Failed — Unable to Establish Connection — a network-level connection failure without any DLL mention.
- Fix: The System Cannot Find the File Specified — a different "file" error caused by the Volumetrica Bridge component.

Most likely cause

The Microsoft Visual C++ Redistributable packages that dxFeed_64.dll depends on are missing, outdated, or corrupted on your Windows system, so the DLL cannot load its runtime libraries.

Quick fix

Install (or reinstall) the Visual C++ Redistributable:

1. Close DeepCharts completely.
2. Download the Microsoft Visual C++ Redistributable that matches your system — **X64**, **X86**, or **ARM64**.

[CONFIRM: official Microsoft download link to include here]

Tip: Installing both the X86 and X64 versions is safe and recommended — many trading platforms require these runtimes, so this fixes other software too.

3. Run the installer (or installers).

[SCREENSHOT PLACEHOLDER] The Microsoft Visual C++ Redistributable installer window on the setup screen, before clicking Install [vc-redist-installer.png](#)

4. Restart your computer.
5. Reopen DeepCharts and reconnect your data feed.

Note: You do not need to reinstall DeepCharts for this fix.

If that didn't work

Cause: The installed redistributable is corrupted

If the redistributable was already present, the installed copy may be damaged. Run the downloaded installer again — if it offers a **Repair** option, use it — then restart your computer and try the connection again.

Cause: Only one architecture is installed

If you installed a single package, add the other one as well (both X86 and X64 on a standard 64-bit Windows PC; ARM64 on ARM-based devices). Restart the computer afterwards.

Still stuck

Generate a Diagnostic Report: Before You Contact Support so support can see the exact exception, then contact the team through [How to Get Help](#) (Chat, Diagnostic Report, Support).

Prevent this

Keep your Windows runtimes current and set up the feed by following [How to Connect a dxFeed Data Feed](#). Checking your machine against [System Requirements](#) before installing DeepCharts avoids most missing-dependency errors.
