

Fix: Symbol Subscription Issue

Connections & Data Feeds / Troubleshooting | beginner | 10 min to complete | DeepCharts Help Center | July 20, 2026

DeepCharts reports a symbol subscription issue when it cannot match the symbol you are opening to an active data feed connection. The fix is almost always in **Symbol Manage**: the market is either missing from the list or assigned to the wrong connection name.

Symptom

- DeepCharts shows a symbol subscription issue when you open a chart or workspace.
- A chart cannot load data for a specific symbol even though your data feed appears to be connected.

Not to be confused with:

- Fix: Live Feed Connected but Chart Is Not Moving — the chart opens but price never updates (a closely related mapping problem).
- Fix: dxFeed DATA_ACCESS_SUSPENDED — a dxFeed account-level suspension, not a mapping issue.

Most likely cause

The market (exchange) is not listed in **Symbol Manage**, or it is assigned to the wrong connection name — so DeepCharts does not know which feed should deliver that symbol's data.

Quick fix

1. Check that your data feed is properly connected — look for the green indicator in the DeepCharts feed bar.

[SCREENSHOT PLACEHOLDER] DeepCharts feed bar with the green connection indicator visible next to the active feed name `feed-bar-green-indicator.png`

2. Confirm you actually have a data feed that covers the market you want to analyze. See [Supported Brokers, Prop Firms and Data Feeds](#) for which feeds cover which markets, and [How to Buy a Data Feed and Get Your Credentials](#) if you still need a subscription.
3. Remove the check mark next to your data feed in the connection list to take it offline while you edit the mapping. **[CONFIRM: original article says "Connect the data feed and remove the check mark" — verify whether the feed must be connected or disconnected while remapping symbols]**
4. Close all workspaces.
5. Go to **Options** → **Symbol Manage**.
6. Verify that the markets you trade are listed and that each shows the correct connection name next to it — the interactive Symbol Manage mock below shows exactly what to look for; click the chain-link icon to cycle a market's mapped feed.

7. If a market shows the wrong connection (or none), right-click the market and choose the correct connection from the dropdown menu.

8. Click **Select** to save the change.

9. Close the **Symbol Manage** window.
10. Reconnect your data feed.
11. Open your chart or workspace again.

If that didn't work

Cause: The exchange was never subscribed

If the Symbol Manage list does not contain your market at all, you need to subscribe the exchange first and link it to your feed. Follow Symbol Manage: Subscribe Exchanges and Map Your Feed for the full subscribe-and-map walkthrough.

Cause: The market data agreement is not signed

Some feeds reject symbol subscriptions until the exchange agreement is completed. See Sign Your Market Data Agreement.

Cause: Your feed subscription does not include that exchange

A feed only delivers the exchanges included in your data subscription. Check what your plan covers in Supported Brokers, Prop Firms and Data Feeds, or purchase the missing feed via How to Buy a Data Feed and Get Your Credentials.

Still stuck

Generate a Diagnostic Report: Before You Contact Support — it records which feed each exchange is routed to — then contact support through How to Get Help (Chat, Diagnostic Report, Support).

Prevent this

Set up your exchanges and feed mapping once, correctly, using Symbol Manage: Subscribe Exchanges and Map Your Feed. After adding a new feed or account, re-check the mapping before opening charts.
